### PHD DISSERTATION AND MASTER THESIS

1993 Consumer policy - A social network/political economy perspective. Unpublished doctoral dissertation, University of Strathclyde, Glasgow Scotland. Advisor: Dr. Keith Fletcher. This research entailed the development of a macro-relational consumer policy framework that was used to analyze the 20-year policy development process for banking machines and debit cards, federal Canadian consumer policy. The method involved a content analysis of 230 documents culminating in 16 constituent case studies integrated into a chronological 20-year embedded case study. The data in the embedded case study were analyzed from a network perspective. The latter entailed examining the relational data for evidence of the evolution of relationships and interactions among the members of the EFTS policy network comprising actors from the computer payment system policy community. I published 7 peer reviewed papers from this research.

1984 Process model of family consumer decisions. Unpublished master thesis, University of Alberta, Edmonton. Advisor: Dr. Betty Crown (with Drs. Doris Badir (now deceased) and Linda Van Esch). This research generated a process model to represent the level of involvement of the collection of family members as they make a high involvement consumer decision. It varies from consumer behaviour and marketing models in that it conceives "the family" as the unit of analysis rather than the individual consumer with the family as a reference group. One peer reviewed paper was published from this research.
